

**Graph (51) Number of Referrals for Treatment outside of MoH Facilities, Palestine  
2001- 2018**

#### **2.14.2 Distribution of Service Purchase Referrals in 2018 by Sex**

The number of males referred to treatment outside hospitals of MoH was 61,372 males, 55.9%, and the number of female 48,446 females and 44.1% of the patients referred in 2018.

#### **2.14.3 Distribution of Service Purchase Referrals by type of Service**

The number of referrals for medical consultation was 34,876, accounting for 31.8% of total referrals. In 2017, the rate of referrals for consultation was 23.8%. In 2017, the number of referrals admitted was 74,942 referrals, constituting 68.2% out of all referrals , While in 2017, the rate of referrals admitted was 76.2%.

#### **2.14.4 Distribution of Referrals in West Bank & Gaza Strip**

The number of referrals from Gaza Strip reached 30,869, representing 28.1% of the total number of referrals in 2018, at a cost of 234,363,491 NIS, or 32.3% of the cost of purchasing the service from outside MoH facilities.

The number of referrals from West Bank reached 78,949 transfers, representing 71.9% of the total referrals, at a cost of 490,259,422 NIS, or 67.7% of the cost of purchasing the service from outside MoH facilities.

#### **2.14.5 Distribution of Referrals by Place of Treatment**

##### **A. Purchasing the Service from Local Hospitals (inside Palestine)**

These include private and non-governmental hospitals in Gaza Strip, West Bank and East Jerusalem, where 89,133 cases were referred; it's 81.2% of MoH's total referrals in 2018.

The total cost of these transfers amounted to 537,762,017 Nis, which is equivalent to 74.2% of the cost of purchasing the service from outside MoH, with an average cost of one referral of 6,033 NIS.

In 2017, this cost was 288,996,013 Nis, which accounted for 67% of the total cost of purchasing the service, at an average cost of 3,737 NIS.

##### **\* Purchasing the Service from Hospitals in Gaza Strip**

6,961 medical referrals were issued to hospitals in the southern governorates (Gaza Strip). All these medical referrals were for patients from Gaza Strip, constituting 6.3% of the total number of medical referrals for treatment outside the Ministry of Health. Out of total Gaza Strip referrals 22.6% were issued for cases transferred to non-governmental hospitals within

Gaza strip. The cost of referrals issued for treatment in the Gaza Strip outside MOH was 41,229,583 NIS, which accounting 5.7% of the total cost of purchasing the service, at an average cost of 5,923 Nis per referral.

#### \* Purchasing the Service from West Bank Hospitals

38,916 referrals for treatments were referrals to non-MoH hospitals in West Bank. This represents 35.4% of the total referrals of MoH, at a cost of 218,393,774 NIS, representing 30.1% of the total treatment expenses abroad, with an average cost of 5,612 NIS per every referral.

#### \* Purchasing the Services from East Jerusalem Hospitals

In 2018, the total number of referrals to East Jerusalem hospitals was 43,256, representing 39.4% of the treatment referrals outside MoH, at a cost of NIS 278,138,660, equivalent to 38.4% of the total cost of purchasing the service from outside MoH. The cost was 6,430 NIS per every referral.

30,906 referrals were conducted for patients from West Bank at a cost of 160,366,115 NIS and 12,350 cases from Gaza Strip at a cost of 117,772,545 NIS.

### B. Purchasing the Service from Hospitals outside of Palestine

These include hospitals in Egypt, Jordan and Turkey (two referral cases) as well as hospitals located within the Green Line (Israel) and Turkey, where 20,685 referrals were made, representing 18.8% of MoH total revenues in 2018 at a total cost of 186,860,896 NIS, equivalent to 25.8% The total cost of purchasing the service from outside MoH, at an average cost of 9,034 NIS per every referral.

In 2017, the cost of referrals outside Palestine reached 142,078,762 NIS, equivalent to 33% of the total cost of purchasing the service from outside MoH, at an average cost of 8,072 NISs per every referral.

#### \* Purchasing the Service from Hospitals in Egypt

The total number of referrals to Egypt was 2,301, representing 2.1% of MoH's total revenues. In 2018, all referrals to Egypt were from Gaza Strip 100%.

The cost of treatment in Egyptian hospitals amounted to 5,256,826 NIS, which constitutes 0.7% of the total cost of purchasing the service, and the average cost per conversion is 2,285 NIS.

#### \* Purchasing the Service from the Hospitals of the Hashemite Kingdom of Jordan

The total number of referrals to the Hashemite Kingdom of Jordan was 34 accounting for 0.03% of the total number of service purchases in 2018, including 13 from West B and 21 from Gaza Strip.

In 2018, the cost of purchasing the treatment service was 140,268 NIS; representing 0.02% of the total cost of purchasing the service, and the average cost per every referral is 4,126 NIS.

#### \* Purchasing the Service from Hospitals inside the Green Line (Israel)

In 2018, the number of referrals within the Green Line (Israel) reached 18,348 which 16.7% of the total number of cases of purchase of the service, by 13,576 cases from West Bank, representing 17.2% of West Bank referrals and 4,772 referrals from Gaza Strip or 15.5% from Gaza strip referrals. The cost of referrals within the Green Line amounted to 180,977,302 NIS, which 25% of the total cost of treatment outside of Ministry of Health. The average cost per referral was 9,864 NIS.

#### \* Purchasing the Service from Turkey

In 2018, two cases from West bank were referral to Turkey hospitals. The cost of referrals to Turkey amounted to 486,500 NIS, which 0.07% of the total cost of treatment outside of Ministry of Health. The average cost per referral was 243,250 NIS.

#### 2.14.6 Distribution of Referral Cases by Disease

Table (10) Top 10th of Diseases by Number of Referrals, Palestine 2018

#	Disease	No.	%

### 2.15 Health Insurance

#### 2.15.1 Health insurance in Gaza Strip

Under article (2) of the presidential decree issued on 26/6/2007, which stipulates that "all citizens in the southern governorates are exempted from all services fees provided by the ministries, bodies and institutions of the Palestinian National Authority as of date, including the services provided for the first time All residents of Gaza Strip enjoy the free health insurance provided by the Ministry of Health from then until now. In other words, the coverage of the population of Gaza Strip by the health insurance of the Ministry of Health is 100%.

#### 2.15.2 Health Insurance in West Bank

In 2018, there were 309,499 families participating in health insurance in West Bank. Insurance revenues in West Bank were 238,641,216 NIS, and 18,861 families had free health insurance.

The revenues of symbolic contributions in some services (medicines, radiology and laboratory) amounted to 58,634,538 NIS.

The highest number of insured families was in Hebron governorate with 75,911 families, followed by Nablus governorate with 43,154 families. The lowest number of insured families in Jericho and Al-Aghwar governorate reached 7,018 families.

#### 2.15.3 Types of Health Insurance

##### 1. Compulsory Insurance

This type of insurance is shared by public sector employees, municipalities and retirees. The number of families participating in this insurance was 73,278 in West Bank. The return on this insurance was 63,114,786 NIS.

## **2. Voluntary Insurance**

The number of families participating in this insurance was 2,550 in West Bank, and the return on this insurance was 1,458,610 NIS.

## **3. Insurance of workers within the Green Line (Workers in Israel)**

The number of families benefiting from this insurance was 59,203 families in West Bank, and the return of this insurance was 79,188,663 NIS.

## **4. Group Insurance (Group Contracts)**

The number of families participating in this insurance was 88,455 families in West Bank, and the cash yield from this insurance was 56,714,957 NIS.

## **5. Insurance of Social Development**

The number of families participating in this insurance was 46,057 in West Bank, and the return on this insurance was 26,477,150 NIS.

## **6. Prisoners Insurance**

The number of insured prisoners and their families in this insurance was 21,095 in West Bank, and the return of this insurance was 11,687,050 NIS.

## **8. Free Insurance**

The number of free insured and their families in this insurance was 18,861 in West Bank.

## **2.16 Pharmacy in Palestine**

The national pharmaceutical policy comprises an integral part of the health policy, accordingly the main objectives of the national pharmaceutical policy are based on equity and sustainability in the pharmaceutical field, through pharmaceutical quality assurance which verifies the quality, safety and effectiveness of all medicines in addition to medical herbs and dietary supplements, equitable provision and ability to afford costs of medicines, rational use of medicine and encouraging the national pharmaceutical industries in order to develop their activities.

**Graph (52) Proportional of Outgoing Medicines & Medical Consumables from Drug Store by NIS & Consumers, MoH, Palestine 2018**

### 2.16.2 Registration and Re-Registration Pharmaceutical Products

Medical Registration is including registration of human and veterinary medicines, registration of food supplements, medicinal herbs, cosmetics, medical instruments and materials. In 2018, registration certificates have been issued for 285 human medicines, 18 veterinary medicines, 747 cosmetic preparations, 38 food supplements and 94 medical instruments and materials. also re-registration were issued for 272 human medicines, 32 veterinary medications, 173 cosmetic preparations, 11 medical instruments and materials, in addition to 54 free sales certificates for human medicines and 115 certificates of pharmaceutical products (CPP) were approved.

### 2.16.3 Medicine Pricing and Repricing

In 2018, the number of local medicines which were priced was 33 while the number of imported medicines was 134, the number of local and imported medicines whose price has been updated reached 6,025 medical items categorized in 27 lists, The price of 52 local and imported medication has been reduced since the beginning of 2018, adding to 37 local medical items were priced for exportation.

### 2.16.4 Medications and Cosmetics test

The number of medications sample tested in 2018 reached 973, in which 925 sample pass, which is % 95.1 from all samples, 48 samples failed the test, which % 4.9.

On the hand the number of cosmetics were tested in 2018 were 975 samples, in which 917 samples passed, which is% 94.1 from all samples, 58 samples failed the test, which is %5.9.

### 2.16.5 Import and Local Purchase Permissions

During the year 2018,the number of dangerous drug purchase permits was 434 permission, , while, the number of import licenses for raw materials was 935 permissions, in addition to 1,062 import licenses for cosmetics were issued, plus the approval of 1,337 import permits

for unregistered medicines for hospitals, 401 marketing permits for un registered medicines, 210 release by mail & gates, and 320 miscellaneous permits.

#### **2.16.6 Proceedings against Violators**

In 2018, the number of pharmacists who were transferred to the Disciplinary Council was 146 pharmacists, and a recommendation was made to close one pharmacy.

The number of detecting and confiscation procedures was 113 while the number of detecting and reservations procedures was 229.

#### **2.16.7 Human Resources of Pharmaceutical Sector**

##### **1. Pharmacists and Assistant pharmacists who Practicing Profession**

In 2018, the number of pharmacists who Practicing Pharmacy profession in West Bank reached 4,810 pharmacists with a rate of 16.5 pharmacist per 10,000 populations.

**Table (13) Pharmacists Rate per 10,000 Populations by Governorate, West Bank, Palestine 2018**

2018**

### 2.17 Health Expenditure in MOH

In 2018 According to the data received from the General Directorate of Finance in the Palestinian Ministry of Health, the current budget of Palestinian Ministry of Health amounted to 1,767,295,225 NIS, distributed over the main budget items, where the salary item accounted for the largest percentage of 48% of the total budget followed by treatment abroad by 25% , While the item of medicines and medical consumables amounted to 18% and the item of capital expenditures and other operating are the smallest percentage which amounted to 9% of the total current budget.

**Graph (54) Proportional Distribution of Ongoing Budget, MoH, Palestine 2018**

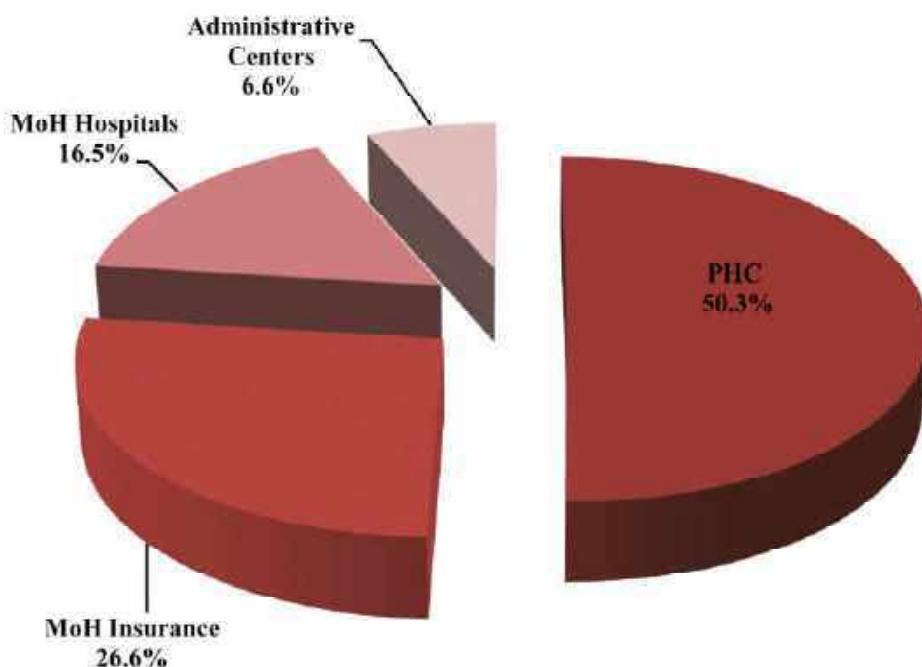

The balance of arrears (for debts from 2017 and earlier) amounted to NIS 839,538,906 distributed over the main budget items. The referral abroad item (purchase of services from outside MOH) constituted 56% of the total balance of arrears. Medicines and medical

consumables accounted for 40%, other capital and operating expenses accounted for 5% of the total balance of arrears.

## 2.18 General Revenues of the Palestinian MOH

In 2018, the general revenues of the Palestinian MOH amounted to 218,624,185 NIS, divided by type of revenue. The general revenues collected from primary health care constituted the highest percentage of revenues, reaching 50.3%, followed by public revenues from health insurance, which amounted to 26.6% Public revenues collected from government hospital revenues were 16.5%, while public revenues from administrative centers were the lowest which account of 6.6%.

**Graph (55) Proportional Distribution of Total Revenues, MoH, Palestine 2018**

## Section Three

### Trends in Health Status

#### 3. Health Status in Palestine

##### 3.1 Morbidity

###### 3.1.1 Communicable Diseases

Vaccination coverage levels are one of the best indicators of the health system performance. Therefore, MoH provides all the needed services to ensure that immunizations for each child according to the national immunization schedule are granted.

###### 1. Poliomyelitis & Acute Flaccid Paralysis (AFP)

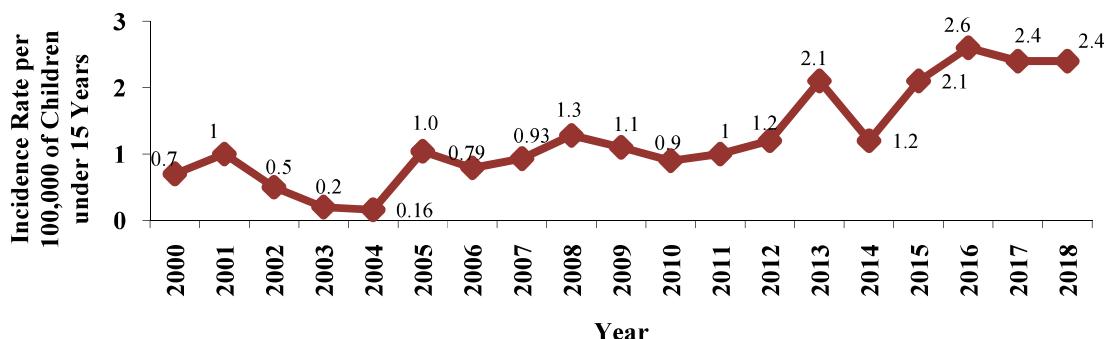

Poliomyelitis became under control since the MoH was able to prevent and eradicate the disease with no cases recorded since 1988.

Based on WHO recommendations, MoH monitors cases of acute flaccid paralysis in children under the age of 15 years and takes two stool samples from each case which is recorded in order to ensure that Palestine is free from poliomyelitis.

In 2018, 42 cases of acute flaccid paralysis were reported, with a incidence rate of 2.4 per 100,000 of children under the age of 15 years, of which 26 cases were reported in West Bank and 16 reported cases in Gaza Strip, all of which were polio-free.

MoH follows the World Health Organization (WHO) standards for poliomyelitis eradication through high immunization coverage, national vaccination days, vaccination of children at risk places where needed, and epidemiological surveillance of acute Flaccid Paralysis (AFP).

**Graph (56) Incidence Rate of AFP per 100,000 Children under 15 years of Age, Palestine 2000- 2018**

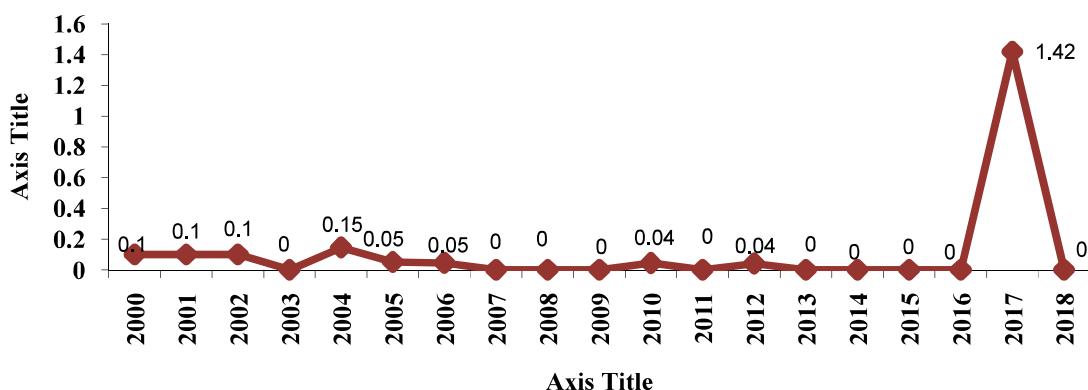

###### 2. Measles

A single measles case was recorded in Hebron Governorate in 2006, while no cases have been reported since 2007 in both West Bank and Gaza Strip. MoH has been able to reach the required standards for measles elimination, according to WHO, through high coverage of children with measles doses at the age of 9 months and 15 months, which replaced by MMR at 12 months and 18 months. Measles vaccination campaigns and MMR routine vaccination in the past years were implemented to increase the herd immunity in the Palestinian community against this disease.

In 2010, only one case was recorded in Jerusalem governorate, while no cases were recorded in 2011. In 2012, only one case was recorded in Nablus Governorate, while in 2013, 2014, 2015 and 2016 no cases were recorded.

In 2017, there were 63 cases of Measles reported in Palestine at a incidence rate of 1.42 per 100,000 population, Where all cases in West Bank, 56 cases were recorded in Jenin governorate, 4 cases in Yatta and One case in Nablus, Salfit and Ramallah & Al Bireh.  
In 2018 no cases of measles were reported in Palestine.

**Graph (57) Incidence Rate of Measles per 100,000 Pop., Palestine 2000- 2018**

### 3. Tuberculosis

#### 3.1 Pulmonary Tuberculosis

In 2018, 18 cases of tuberculosis were reported in Palestine with an incidence rate of 0.39 per 100,000 populations, of which 7 cases were reported in West Bank with a incidence rate of 0.27 per 100,000 of populations and 11 cases were reported in Gaza Strip with incidence rate of 0.57 per 100,000 of populations.

#### 3.2 Extra-pulmonary Tuberculosis

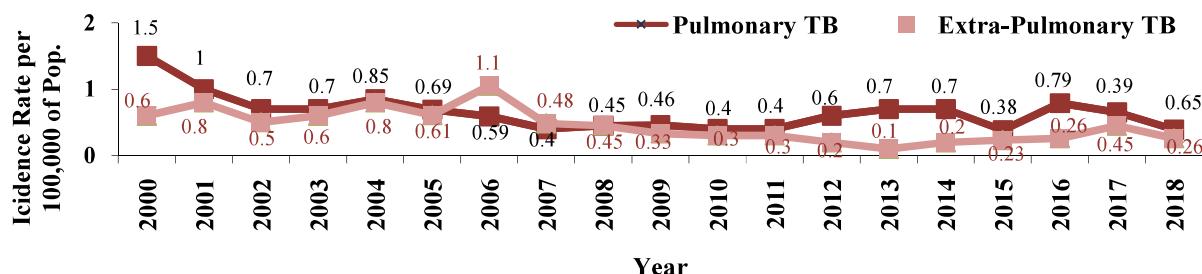

In 2018, 12 extra-pulmonary tuberculosis cases were reported with incidence rate of 0.26 per 100,000 populations, of which 8 were in Gaza Strip and 4 in West Bank.

While in 2017, 20 extra-pulmonary tuberculosis cases were reported, of which 15 were in Gaza Strip and 5 in West Bank with a incidence rate of 0.45 per 100,000 of populations.

The coverage of neonatal vaccination against BCG has reached very high levels (almost full coverage).

Since 1996, MOH has implemented the DOTS system for the treatment of TB patients, which is based on direct surveillance and treatment of TB patients.

**Graph (58) Incidence Rate of Tuberculosis per 100,000 Pop., Palestine 2000- 2018**

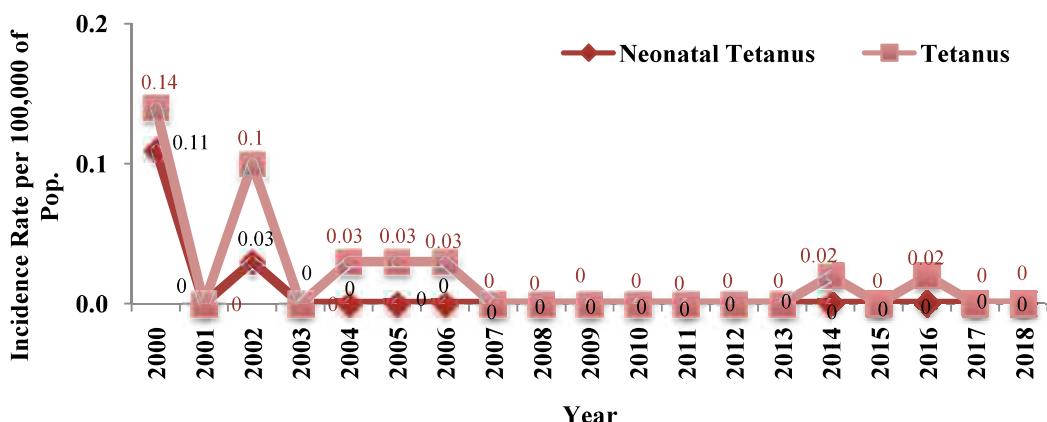

### 4. Tetanus

Tetanus and especially neonatal tetanus, remains a public health problem worldwide. However, in Palestine, no case has been reported among newborns in the past four years that reflects MoH success in controlling and eradicating neonatal tetanus, in addition to high coverage among pregnant women for vaccination (TT).

WHO strategy for the elimination of neonatal tetanus has aimed at having an annual incidence rate less than 1\1000 live births in each region, this goal has been achieved by Palestine for the last ten years.

In 2017 and 2018, no reported cases of tetanus in Palestine.

**Graph (59) Incidence Rate of Tetanus per 100,000 Pop., Palestine 2000- 2018**

## 5. Mumps

In December 2003, there was a significant outbreak of mumps in Nablus governorate, affecting mainly children under the age of 15, with more than 4,000 cases were registered among refugee and non-refugee children.

In addition, during the months of April and May 2004, the spread of the disease reached its peak and spread to other parts of West Bank, which required the implementation of a national campaign against measles and rubella. More than 600,000 people aged 6 years and university students were vaccinated with (MMR) which halted the epidemic in 2006. Thereafter, there was a significant decrease in the number of reported cases of mumps in West Bank.

In 2014, there was a significant increase in the number of mumps cases in Gaza Strip to mount up to 18,535 cases. The number of mumps cases reported in Palestine was 18,570, of which 35 were in West Bank, the incidence rate was 408.1 per 100,000 populations, in West Bank 1.3 per 100,000 and in Gaza Strip 1,053.1 per 100,000 populations.

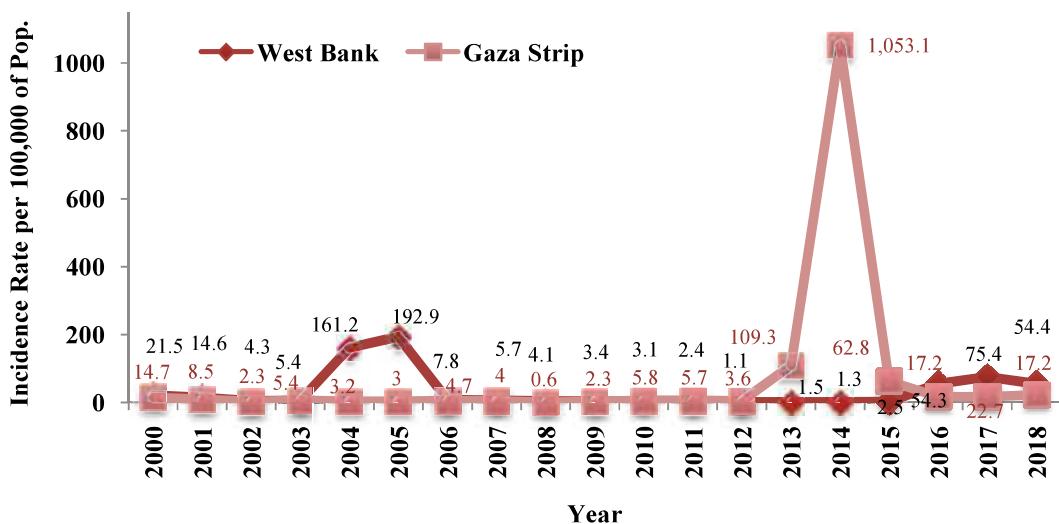

In 2015, the number of mumps cases reported in Palestine was 1,214 cases, of which 71 were in West Bank and 1,143 in Gaza Strip. The incidence rate at national level was 25.9 per 100,000 populations, in West Bank 2.5 per 100,000 and in Gaza Strip 62.8 per 100,000 populations.

In 2016, there were 1,773 cases of mumps reported in Palestine, of which 1,449 cases in West Bank and 324 cases in Gaza Strip. The incidence rate was 39.0 per 100,000 populations, while in West Bank it was 54.3 per 100,000 populations, in Gaza Strip 17.2 per 100,000 populations.

In 2017, there were 2,259 cases of mumps reported in Palestine, of which 1,937 cases in West Bank and 322 cases in Gaza Strip. The incidence rate was 50.8 per 100,000 populations, while in West Bank it was 75.4 per 100,000 populations, in Gaza Strip 17.2 per 100,000 populations.

In 2018, there were 1,872 cases of mumps reported in Palestine, of which 1,433 cases in West Bank and 439 cases in Gaza Strip. The incidence rate was 41 per 100,000 populations, while in West Bank it was 54.4 per 100,000 populations, in Gaza Strip 22.7 per 100,000 populations.

**Graph (60) Incidence Rate of Mumps per 100,000 Pop., Palestine 2000- 2018**

## 6. Meningitis

Meningitis can be caused by different types of viruses, bacteria, and even fungus.

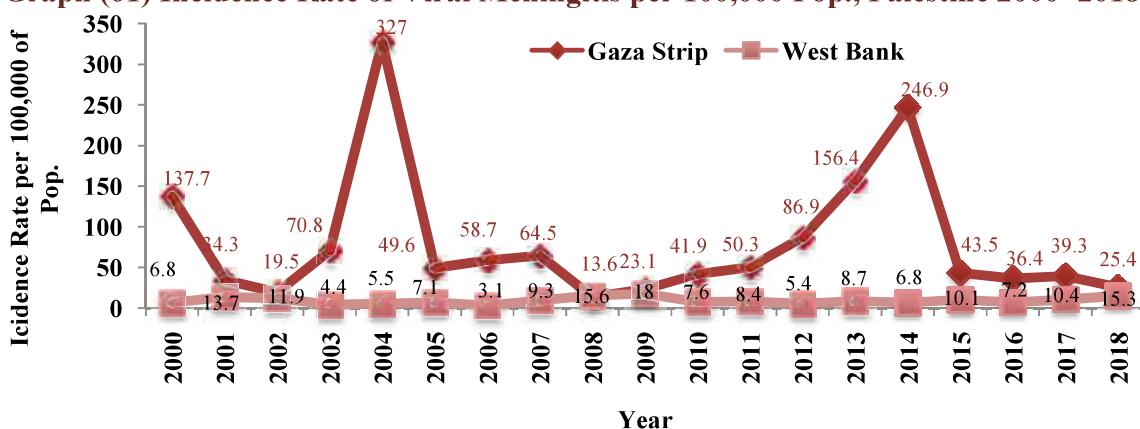

### 6.1 Viral (Aseptic) Meningitis

Viral meningitis is rarely serious, but patients need support and care, and may cause many viruses; such as Coxsackie's or intestinal virus.

Viral meningitis is one of the endemic diseases in Palestine with some seasonal variation, with the majority of cases, more than 72% in spring and summer seasons.

In 2018, there were 894 cases of Viral Meningitis reported in Palestine, of which 404 cases in West Bank and 490 cases in Gaza Strip. The incidence rate was 19.6 per 100,000 populations, while in West Bank it was 15.3 per 100,000 populations, in Gaza Strip 25.4 per 100,000 populations.

**Graph (61) Incidence Rate of Viral Meningitis per 100,000 Pop., Palestine 2000- 2018**

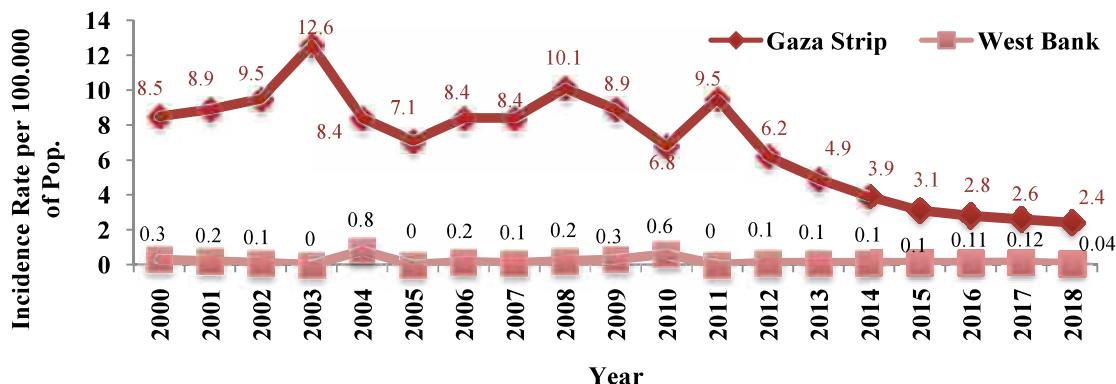

### 6.2 Bacterial Meningitis

Bacterial meningitis is caused by different types of bacteria (Haemophilus Influenza type B, Neiseria meningitidis, Streptococcus pneumonia, and other types of bacteria)

### **6.3 Meningococcal Meningitis**

This type of meningitis is one of the most important infectious diseases known to humans. In 2018, there were 48 cases of Meningococcal Meningitis reported in Palestine, of which one case in West Bank and 47 cases in Gaza Strip. The incidence rate was 1.1 per 100,000 populations, while in West Bank it was 0.04 per 100,000 populations, in Gaza Strip 2.4 per 100,000 populations.

**Graph (62) Incidence Rate of Meningococcal Meningitis per 100,000 Pop., Palestine 2000- 2018**

### **6.4 Haemophilus Influenza type b Meningitis**

Infection is caused by Haemophilus Influenza type b (Hib) which causes meningitis, that is responsible for high rates of morbidity and mortality among children worldwide, It is called child bacterial Meningitis.

As a result of MoH immunization policy, no cases were recorded in 2014 and 2015.

In 2016 two cases were reported in Ramallah and Al Bireh governorate and North Gaza Governorate.

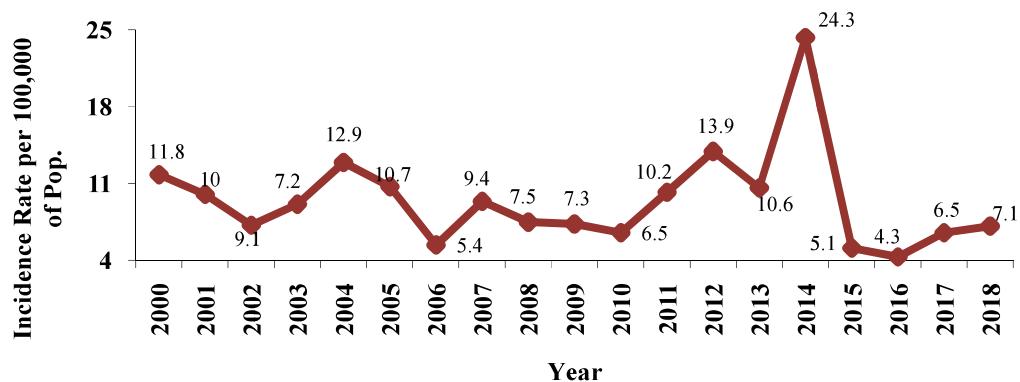

In 2017 and 2018, there were no reported cases of tetanus Haemophilus influenza meningitis.

### **6.5 Other types of Bacterial Meningitis**

Various types of bacteria, especially Streptococcus pneumonia, cause inflammation of the meningitis in Palestine.

In 2018, 323 cases reported with an incidence rate of 7.1 per 100,000 populations. The reported cases in West Bank were 117 cases with an incidence rate of 4.4 per 100,000 and in GS 206 cases with an incidence rate of 10.7 per 100,000 populations.

**Graph (63) Incidence Rate of Other Bacterial Meningitis per 100,000 Pop., Palestine 2000- 2018**

## 7. Viral hepatitis infections

Viral hepatitis A, B, C is one of the major public health problems in the world.

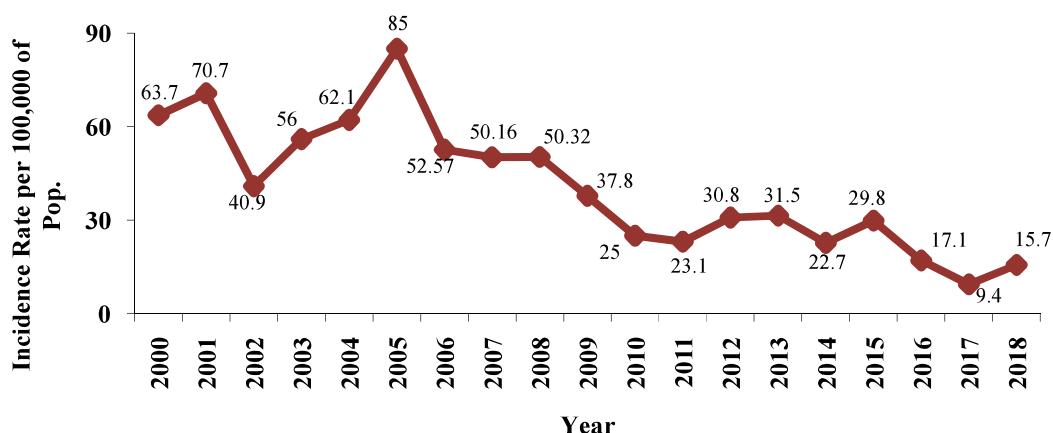

### 7.1 Viral Hepatitis A

Viral hepatitis A is considered as one of the most common diseases and a major cause of viral hepatitis in the world with a direct correlation with age.

In 2018, 717 cases of hepatitis A were reported with an incidence rate of 15.7 per 100,000 populations, of which 208 cases in West Bank at an incidence rate of 7.9 per 100,000 population and 509 cases in Gaza Strip at an incidence rate of 26.3 per 100,000.

Most cases of viral hepatitis A occur in early childhood and are asymptomatic.

**Graph (64) Incidence Rate of Viral hepatitis A per 100,000 Pop., Palestine 2000- 2018**

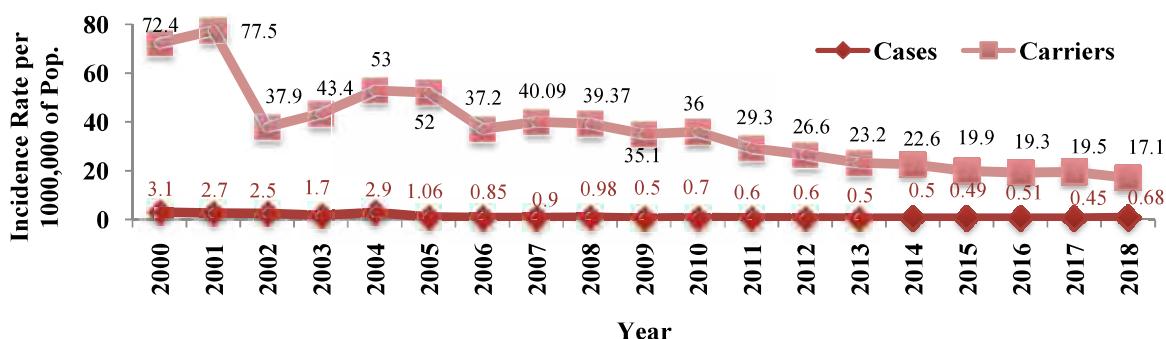

### 7.2 Viral Hepatitis B

Viral Hepatitis B is a major health problem in the Middle East. In Palestine, the incidence rate of hepatitis B cases ranged from 11-15 per 100,000 in the period 1990-1994. From 1995 to 1999, the incidence rate was 5-9 per 100,000 populations and declined to 3 per 100,000 populations in 2000.

In 2018, 31 cases were reported with an incidence rate of 0.68 per 100,000 populations, of which 27 cases in West Bank at an incidence rate of 1.02 per 100,000 and 4 cases was reported in Gaza Strip at a rate of 0.21 per 100,000 populations.

The number of carriers reported with the hepatitis B virus was 781 cases with an incidence rate of 17.1 per 100,000 populations, of which 554 carriers in West Bank at an incidence rate of 21 per 100,000 population and 227 carriers in Gaza Strip at a rate of 11.7 per 100,000 populations.

**Graph (65) Incidence Rate of Cases & Carriers of Viral Hepatitis B per 100,000 Pop., Palestine 2000- 2018**

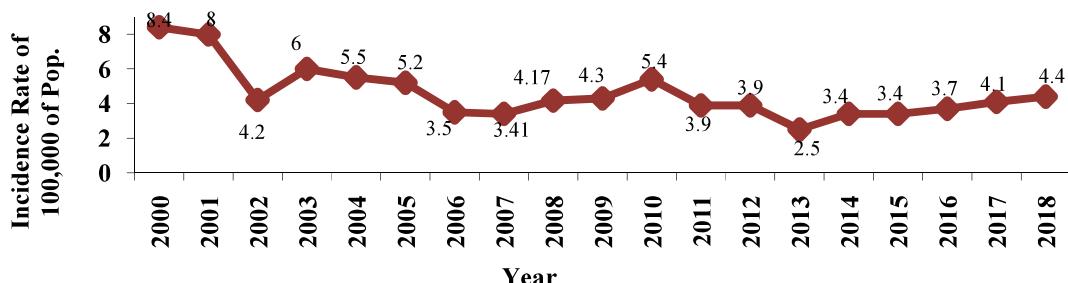

### 7.3 Viral Hepatitis C

Hepatitis C has emerged as a serious public health problem in the world since 1990. WHO estimates that 3% of the world population is infected with hepatitis C and that 80% of the cases develop into chronic inflammation that can lead to cirrhosis and liver cancer.

In Palestine, epidemiological surveillance of viral hepatitis C began in 1994. The incidence of hepatitis and virus carriers ranged from 3-9 per 100,000 in the period 1996-1999 to 8 per 100,000 between 2000 and 2001. In 2002 it decreased to 4.2 per 100,000 populations, but it started to rise in 2003, with an incidence rate of 6 per 100,000 populations.

In 2018, 6 cases were reported with an incidence rate of 0.13 per 100,000 populations, where 2 cases in West Bank and 4 cases was reported in Gaza Strip at a rate of 0.21 per 100,000 populations. The number of carriers reported with the hepatitis C virus was 156 cases with an incidence rate of 3.4 per 100,000 populations, of which 115 carriers in West Bank at an incidence rate of 4.4 per 100,000 population and 41 carriers in Gaza Strip at a rate of 2.1 per 100,000 populations.

**Graph (66) Incidence Rate of Viral Hepatitis C Carriers per 100,000 Pop., Palestine  
2000- 2018**

### 8. Brucellosis

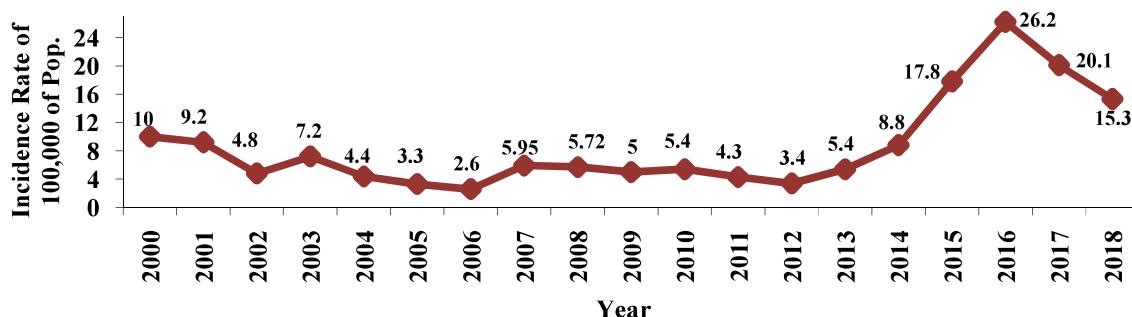

Brucellosis is one of the major endemic diseases in Palestine, with an incidence rate of 32.4 per 100,000 in 1998, one of the highest in the Mediterranean. In 1998, a disease control program was implemented in collaboration with WHO and UNDP.

In Palestine, the cause of this disease (*Brucella melitensis*) is mainly found among sheep and goats. There is a seasonal trend among the annual cases, 60% of cases are recorded in the months of April through September.

Since 2000, there has been a general decline in the incidence rate of Brucellosis, reaching to 10 per 100,000 populations. In 2007, 85% of the total nationally reported cases were in Hebron governorate.

In 2018, 700 cases of Brucellosis were reported with an incidence rate of 15.3 per 100,000 populations, of which 691 cases in West Bank at an incidence rate of 26.2 per 100,000 population and 9 cases in Gaza Strip at an incidence rate of 0.47 per 100,000.

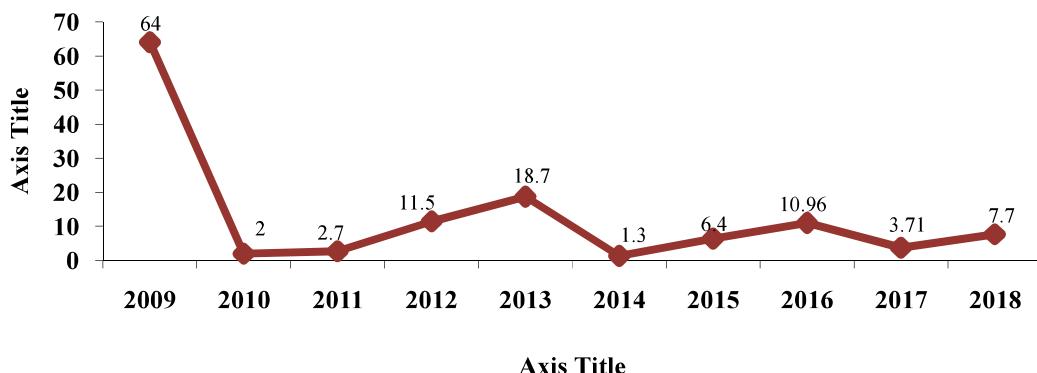

**Graph (67) Distribution of Incidence Rate of Brucellosis per 100,000 Pop., Palestine  
2000- 2018**

## 9. H1N1

In 2018, the number of reported cases of H1N1 was 350, with an incidence rate of 7.7 per 100,000 populations. In West Bank, the incidence rate was 13.1 per 100,000 populations, and 0.2 per 100,000 populations in Gaza Strip.

**Graph (68) Distribution of Incidence Rate of H1N1 per 100,000 Pop., Palestine 2009-2018**

## 10. ADIS / HIV

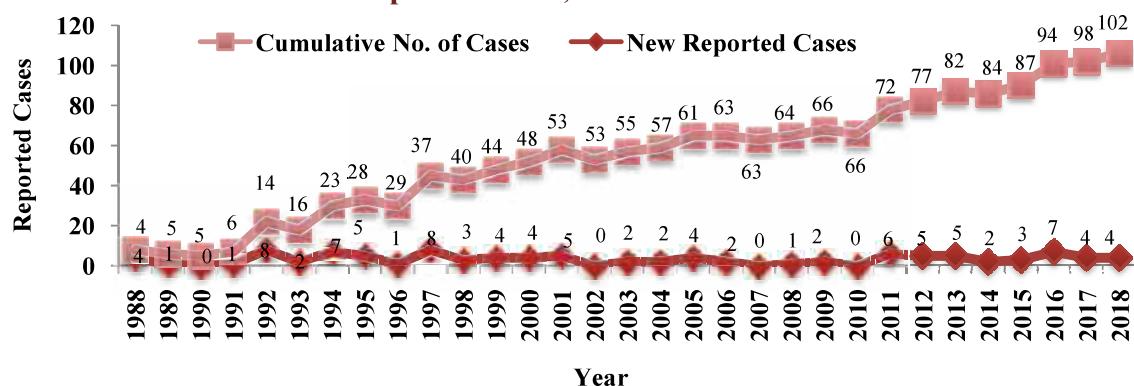

Although the spread of AIDS is increasing in most countries of the world, Palestine, like other Arab and Mediterranean countries, has low HIV\ AIDS infection rate. HIV\ AIDS cases have been reported in Palestine since 1988. The cumulative number of HIV\ AIDS reported cases up to 2018 was 102 cases, of which 81 were AIDS cases and 21 cases were HIV positive.

**Table (18) Cumulative Number of HIV\ ADIS Cases, Palestine 1988- 2018**

HIV/ AIDS	No.	%
HIV	21	20.6 %
AIDS	81	49.4 %
Total	102	100 %

Most of the reported cases were among males; 84 cases out of 102 registered cases, which accounted to 82.4% of the total cases recorded.

**Graph (69) Distribution of New HIV\ AIDS Reported Cases & Cumulative No. of Reported Cases, Palestine 1988- 2018**

### 11. Epidemiology of Sexual Transmitted Diseases (STDs) in Palestine

Similar to other neighboring Arab countries, MoH faces several challenges to combat sexual transmitted diseases (STDs), including behavioral changes and privacy aspects, social stigma, difficulty to follow-up cases, treatment and reluctance of people to access clinics and centers to seek services for such diseases.

These diseases are diagnosed and recorded according to etiology and syndromic approach, according to WHO recommendations.

#### 1. Etiological Diagnosis

During the year 2018, there were 14,273 cases among females in West Bank, where the incidence rate of infection was 1,102.5 per 100,000 of the total number of women in West Bank, diagnosed according to the causes. The number of registered cases among males was 340 with an incidence rate of 25.3 per 100, 000 male.

#### 2. Syndromic Diagnosis

In 2018 were reported 36,776 new female cases of sexually transmitted diseases were recorded in West Bank, which were diagnosed using syndromic approach with an incidence rate of infection of 2,840.7 per 100,000 of women in West Bank. On the other hand, the number of cases among males was 329 with an incidence rate of 24.5 per 100,000 males.

Epidemiological surveillance system of sexual transmitted diseases in Palestine is still in need of further improvement. In this regard, there is a need for more community awareness and the development of the capacities of the human resources working in this field, especially in Gaza Strip.

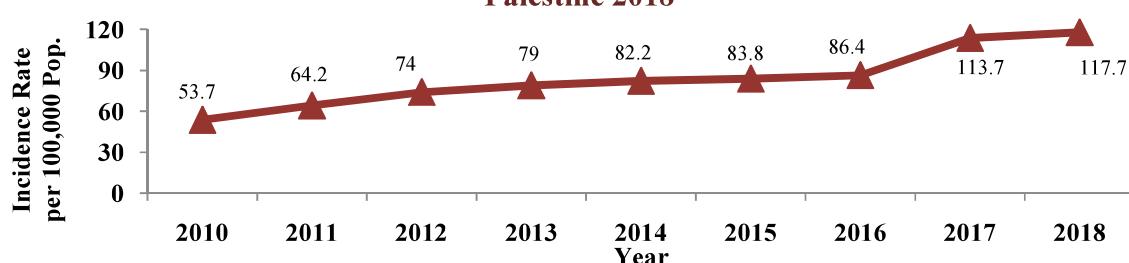

#### 3.1.2 Non Communicable Diseases (NCDs)

##### 3.1.2.1 Cancer

In 2018, 3,479 cancer cases were reported in West Bank, of which 3,102 cases were diagnosed in 2018 while the other cases were previously diagnosed. After comparing 3,102 cases diagnosed in 2018 with 2,923 cases diagnosed in 2017, it turns out that there was a 5.8% increase of cancer cases.

In 2018, the reported crude incidence rate was 117.7 per 100,000 populations.

**Graph (71) Reported Cancer Incidence Rate per 100,000 Population, West bank, Palestine 2018**

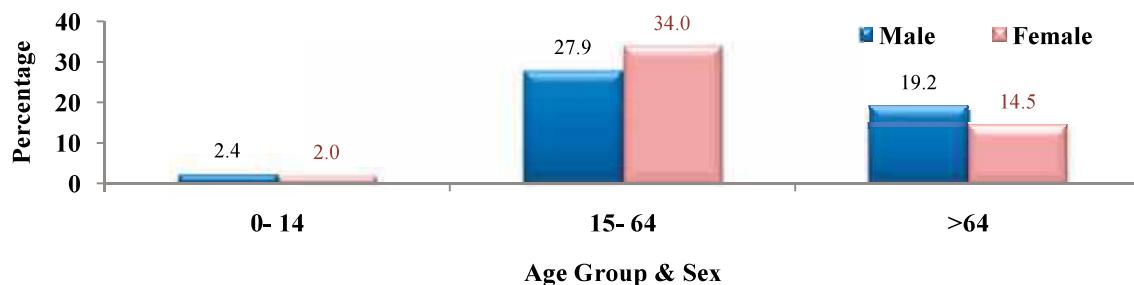

## Distribution of Reported Cancer Cases by Sex and Age Groups

The total number of cancer cases reported among females was 1,565 cases; 50.5 % of all reported cancer cases, in males, 1,537 cases were reported; 49.5% of all reported cancer cases.

In the age above 64 years, 1,046 cancer cases were reported; 33.7% of all reported cancer cases. Taking into consideration that this age group proportion of total population is only 3.6%. While for age groups 15- 64, 1,919 cases were reported; 61.9% of all reported cancer cases, and 137 cases were reported among under 15 year old; 4.4% of all reported cancer cases. This age group is 36.7% of total population.

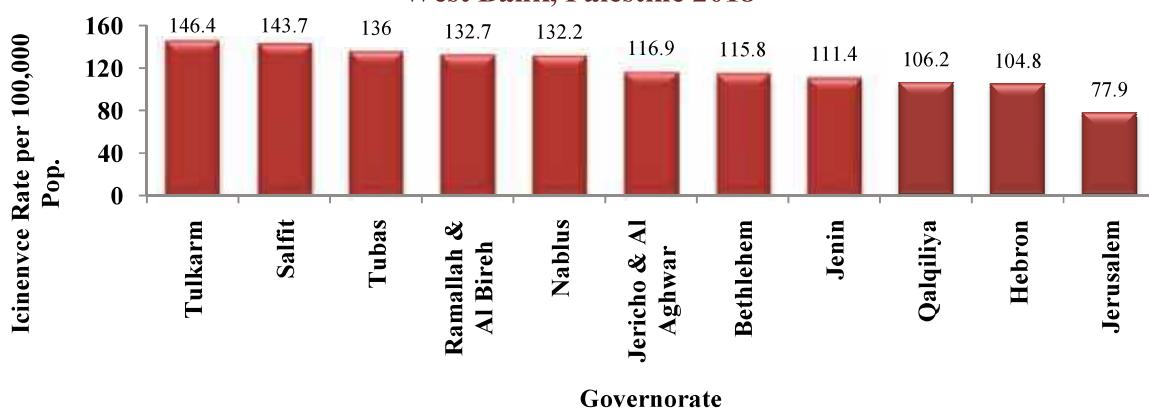

**Graph (72) Percentage of Reported Cancer Cases by Sex and Age Groups, West Bank, Palestine 2018**

## Reported Cancer Cases by Governorate

The geographical distribution of reported cancer cases shows that Tulkarm governorate reported the highest incidence rate 146.4 per 100,000 populations, while Salfit governorate ranked as the second place with an incidence rate 143.7 per 100, 000 of population. Tubas governorate was ranked third with an incidence rate 136.0 per 100,000 of population.

**Graph (73) Cancer Incidence Rate per 100,000 of Population by Governorate, West Bank, Palestine 2018**

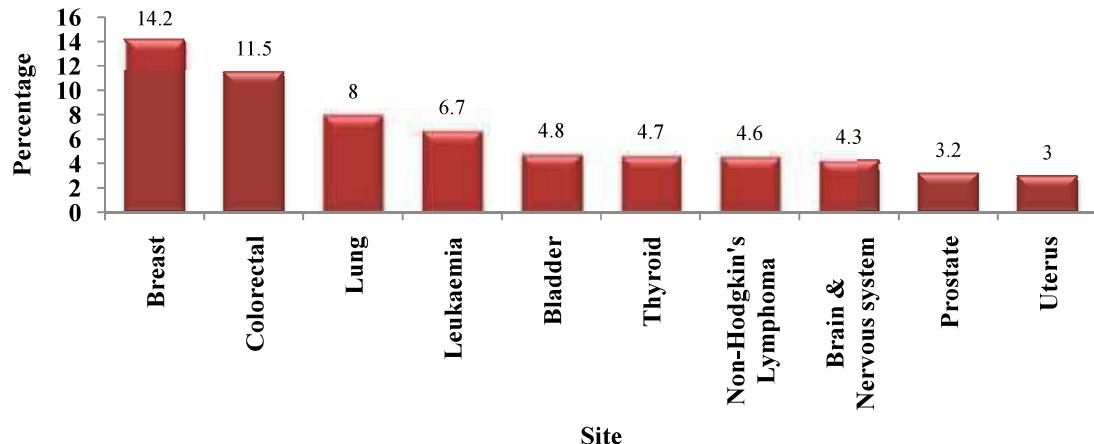

## Most Common Cancer Cases

Breast cancer was the most common cancer with 439 reported cases reported in 2018; 14.2% of all cancer cases with incidence rate 16.7 per 100,000 population. While the second most common cancer was colorectal cancer with 358 reported cases; 11.5% of all cancer cases with incidence rate 13.6 per 100,000 populations. Lung was the third most common cancer with 249 reported cases (8.0% of all cancer cases) with incidence rate 9.4 per 100,000 populations.

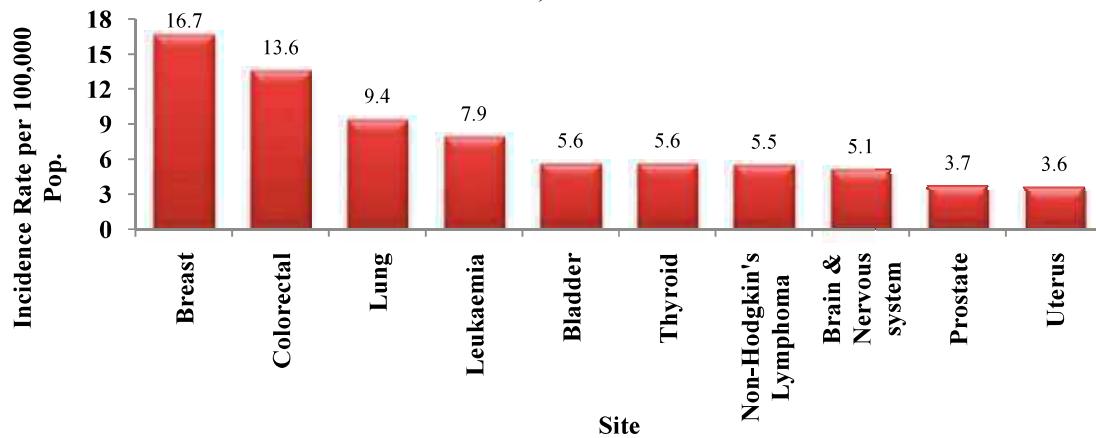

Among females; breast cancer was the most common with 432 reported cases in 2018, representing 27.6% of all cancer cases among females, with incidence rate 33.4 per 100, 000 female population.

Among males; lung cancer is the most common cancer as 207 cases were reported in 2018, representing 13.5% of all males reported cancer cases, with incidence rate 15.4 per 100,000 male populations.

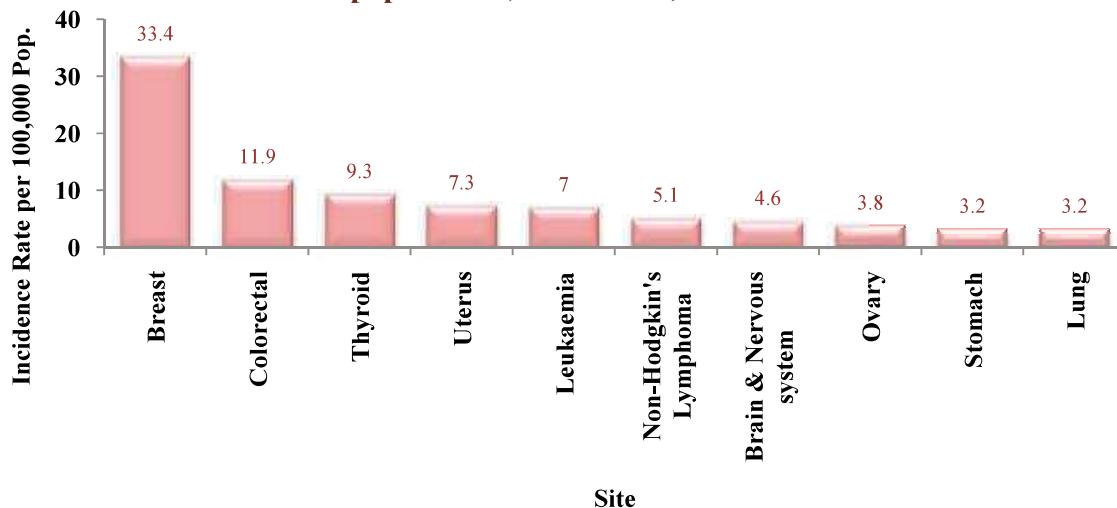

**Graph (74) Distribution of Percentage of Top Ten Reported Cancers in all population, West Bank, Palestine 2018**

**Graph (76) Incidence Rate of Top Ten Reported Cancers among Females per 100,000 Female populations, West Bank, Palestine 2018**

**Graph (77) Incidence Rate of Top Ten Reported Cancers among Males per 100,000  
Male populations, West Bank, Palestine 2018**

### 3.1.2.2 Diabetes Mellitus

#### 1. New Diabetic Cases Reported in MoH PMC Clinics

In 2018, the new reported diabetes Mellitus cases in MoH PHC diabetes clinics in West Bank were 5,555 cases with an incidence rate of 210.7 per 100,000 populations, distributed to 2,420 cases among males with an incidence rate of 180.4 per 100,000 populations and 3,135 among females with an incidence rate of 242.2 per 100,000 populations.

#### 2. Treatment of Diabetes in MoH PHC Clinics

In 2018, 12.5% of diabetes clinic attendees were treated with insulin, compared with 13.1% in 2017 and 21.2% in 2016.

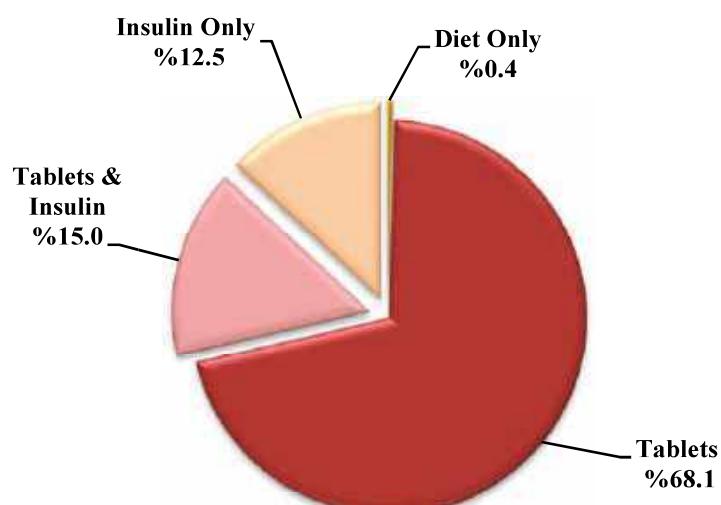

In 2018, 15.0% of diabetes mellitus cases were treated with both tablets and insulin compared to 15.5% in 2017 and 14.8% in 2016.

68

68.1% of patients were treated with tablets, compared with 66.5% in 2017 and 63.0% in 2016.

In 2018 only 0.4% of diabetic patients were treated by diet only, compared to 0.6% in 2017 and 1.0% in 2016.

**Graph (78) Proportional Distribution of Diabetes Mellitus Treatment in PHC Clinics,  
MoH, West Bank, Palestine 2018**

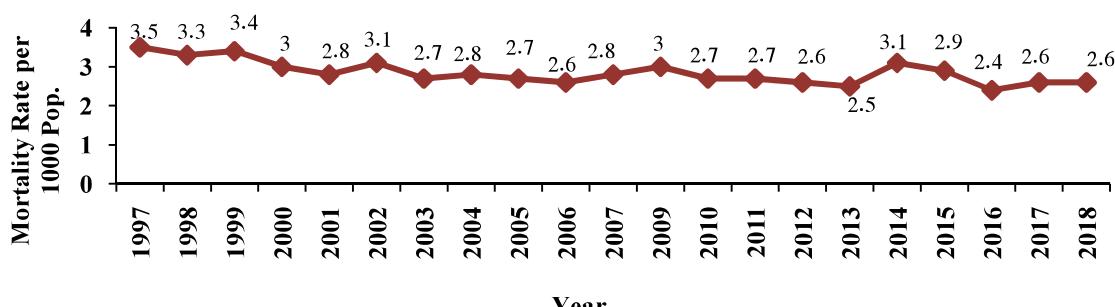

## 3.2 Mortality

### 3.2.1 Crude Death Rate in Palestine

In 2018, reported crude mortality rate in Palestine was 2.6 cases per 1,000 populations, 2.6 cases per 1,000 populations in West Bank and 2.7 cases per 1,000 populations in Gaza Strip.

**Graph (79) Crude Mortality Rate per 1,000 Populations, Palestine 1997- 2018**

### 3.2.2 Number of Deaths in Palestine in 2018

In 2018, the total number of reported deaths in Palestine was 12,098, of which 7,148 were in West Bank, which is 59.1% of total deaths in Palestine.

In the Gaza Strip, the number of reported deaths was 4,950, which is 40.9% of all deaths in Palestine.

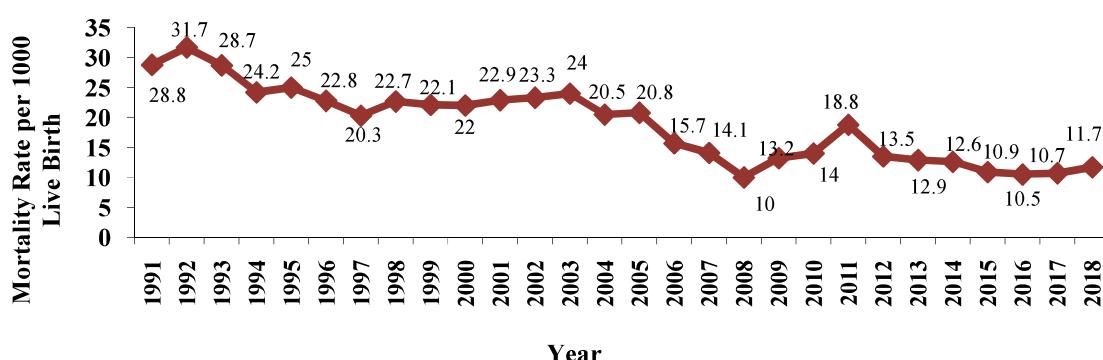

### 3.2.3 Major Causes of Death in Palestine in 2018

- Cardiovascular diseases remains the leading cause of death among Palestinians, accounting for 31.5% of deaths recorded in 2018.
- Cancer was the second leading cause of death, with 15.4% of deaths.
- Cerebrovascular diseases were the third leading cause of death, with 13.0% of causes leading to death.
- Conditions in the perinatal period were the fourth leading cause of death 9.5%.
- Diabetes mellitus complications came in the fifth rank with a proportion of 7.5%.
- While accidents of all kinds ranked in the sixth place among the leading causes of death with 4.0% of deaths.
- Respiratory diseases ranked in the sixth place with 3.7%.
- Congenital anomalies ranked the eighth with 3.5%.
- Chronic renal failure were the ninth leading cause of death, accounting for 2.9%.
- In the tenth place digestive and liver diseases accounted for 2.7% of total reported deaths in 2018.

### 3.2.4 Reported Infant Mortality in Palestine 2018

Reported infant mortality rate in Palestine in 2018 was 11.7 per 1,000 live births.

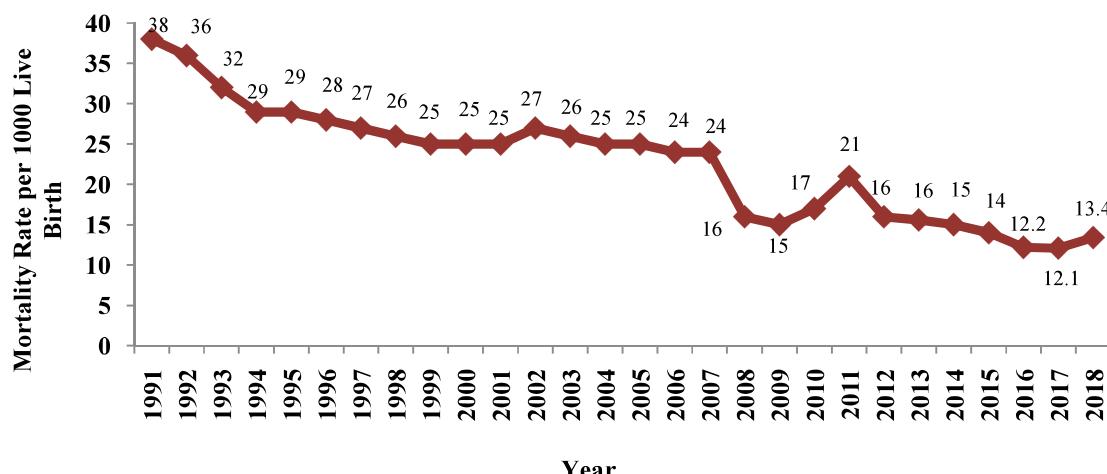

**Graph (80) Reported Infant Mortality Rate per 1,000 Live Births, Palestine 1991- 2018**

### **3.2.5 Under Five Children Reported Mortality Rate**

In 2018, the reported under five years child mortality rate was 13.4 deaths per 1,000 live births.

**Graph (81) Reported Under Five Mortality Rate per 1,000 Live Births, Palestine 1991-2018**

### **3.2.6 Cancer Mortality in Palestine 2018**

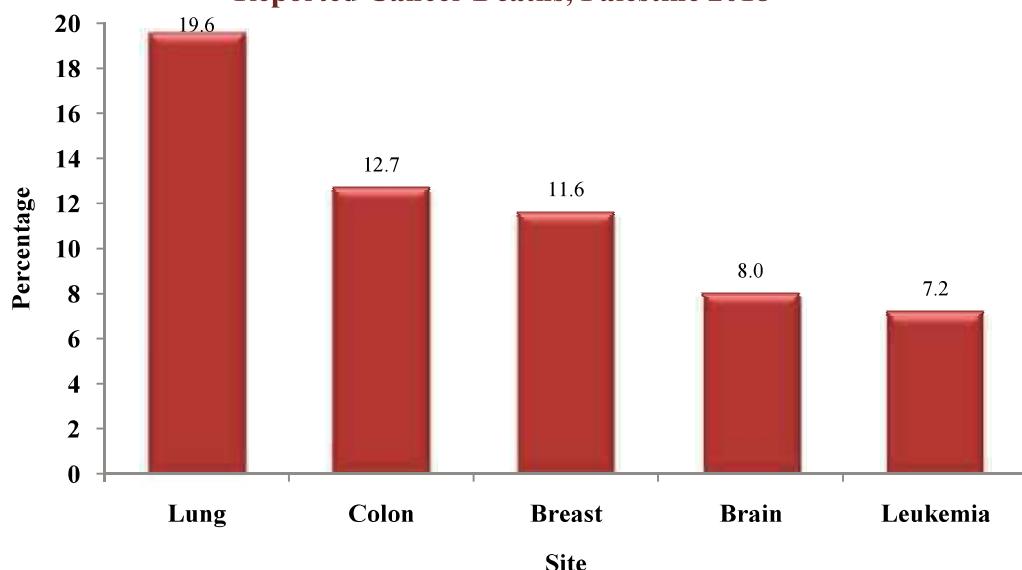

In 2018, the cancer deaths were 15.4% of the total reported deaths with 54.5% of cancer deaths among males, and 45.5% among female.

The first cause of cancer deaths in 2018 was lung cancer with 19.6% of all cancer deaths, followed by colon cancer by 12.7%, then breast cancer by 11.6%, and brain cancer by 8.0% then leukemia by 7.2%.

In cancer causing deaths among males, lung cancer was the first leading cause of death, followed by colon cancer.

In females, breast cancer ranked the first as the leading cause of death followed by colon cancer.

**Graph (82) Proportional Distribution of the most Reported Cancer Deaths of all Reported Cancer Deaths, Palestine 2018**

### 3.2.7 Reported Diabetes Mellitus Deaths

In 2018, there were 538 deaths due to complications of diabetes, with mortality rate of 20.4 per 100,000 populations in West Bank, with 259 deaths among males, 19.8 cases per 100,000 males and 279 deaths among females, 21.6 cases Per 100,000 females in West Bank.

**Table (22) Distribution of Diabetes Mortality Incidence Rate per 100,000 Populations by Sex & Age Group, West Bank, Palestine 2018**

Item	Age Group				Sex		Total
	0 - 4	5 - 19	20- 59	60+	Male	Female	
No. of Reported Deaths	0	0	79	459	259	279	538
IR \ 100,000 Pop. In the same interval	0.0	0.0	5.7	283.3	19.8	21.6	20.4

### 3.2.8 Maternal Mortality in 2018

These are the deaths of a woman while pregnant or within 42 days of termination of pregnancy. This indicator is linked to the sustainable development goals to reduce maternal mortality. Active monitoring of maternal mortality in Palestine has been implemented since 2009.

In 2018, the reported number of maternal deaths in Palestine was 22 cases, including 11 in West Bank and 11 in Gaza Strip.

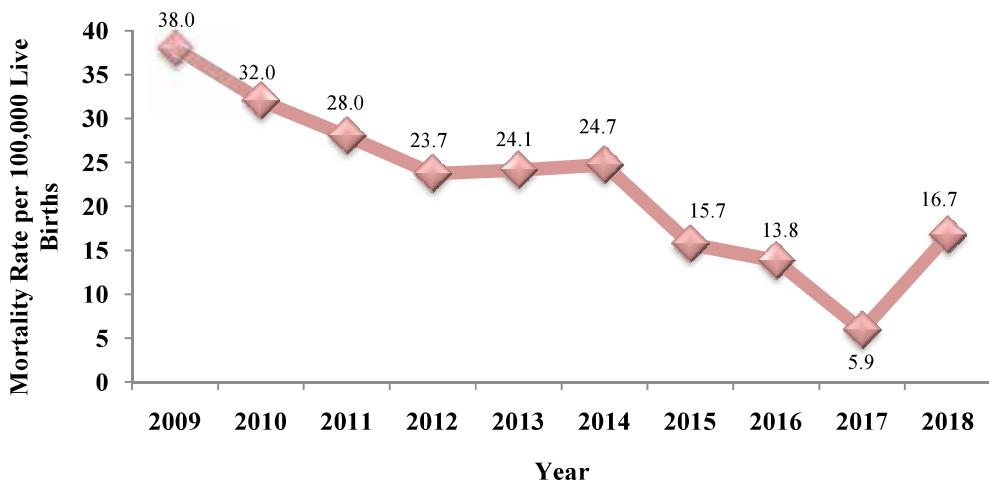

Reported maternal mortality rate (MMR) in Palestine in 2018 was 16.7 per 100,000 live births; 14.8 per 100,000 live births in West Bank and 19.1 per 100,000 live births in Gaza Strip.

**Table (23) Distribution of Number of Reported Maternal Mortality by Governorate, Palestine 2018**

West Bank	Jenin	Tubas	Tulkarm	Nablus	Qalqilya	Salfit	Ramallah & Al Bireh	Jericho & Al Aghwar	Jerusalem	Bethlehem	Hebron

Gaza Strip	North Gaza	Gaza	Dair Albalah	Khan Yunis	Rafah
11					

**Graph (83) Reported Maternal Mortality Rate per 100,000 Live Births, Palestine 2009-2018**

### 3.2.9 Near-Miss of Maternal Mortality

In order to monitor the success stories achieved by MoH hospitals through the medical staff working within it to reduce maternal mortality and treatment of cases that could have led to such deaths, and within the recommendations of WHO, MoH through the General Department for Health and Development of Women in collaboration with PHIC to establish a Near-Miss maternal mortality monitoring system.

In 2018, the number of reported Near-miss was 91 cases in most hospitals of MoH, but unfortunately, the data in some cases incomplete and does not to be considered a Near-Miss case.

**Table (24) Distribution of Number of Near-Miss Reported Cases by Hospital, MoH, West Bank, Palestine 2018**

Hospital	No. of Reported Near-Miss Cases	%
<b>Jenin (Khaleel Sulaiman)</b>	<b>30</b>	<b>33%</b>
<b>Tubas Turkish</b>	<b>0</b>	<b>0%</b>
<b>Tulkarm (Thabit Thabit)</b>	<b>2</b>	<b>2.2%</b>
<b>Rafidia\ Nablus</b>	<b>11</b>	<b>12%</b>
<b>Qalqiliya (Darweesh Nazal)</b>	<b>3</b>	<b>3.3%</b>
<b>Salfit (Yasser Arafat)</b>	<b>2</b>	<b>2.2%</b>
<b>Palestine Medical Complex (PMC)\ Ramallah</b>	<b>25</b>	<b>27.5%</b>
<b>Jericho</b>	<b>0</b>	<b>0%</b>
<b>Beit Jala (Al Hossein)</b>	<b>5</b>	<b>5.5%</b>
<b>Hebron (Alia)</b>	<b>9</b>	<b>9.9%</b>
<b>Mohammad Ali Al Mohtaseb</b>	<b>4</b>	<b>4.4%</b>
<b>Yatta (Abu Al Hassan Al Kassem)</b>	<b>0</b>	<b>0%</b>
<b>Total</b>	<b>91</b>	<b>100%</b>

Four Near-Miss cases were reported in the age group of 15-19 years, 41 cases in 20-29 age group, 42 cases in 30- 39 age group, and 4 cases in 40- 49 age group.

37 cases complained from severe haemorrhage ,54 cases suffered from severe preeclampsia. 16 cases were had normal vaginal delivery, 75 cases had caesarean section (CS) with 10 from them had Hysterectomy.

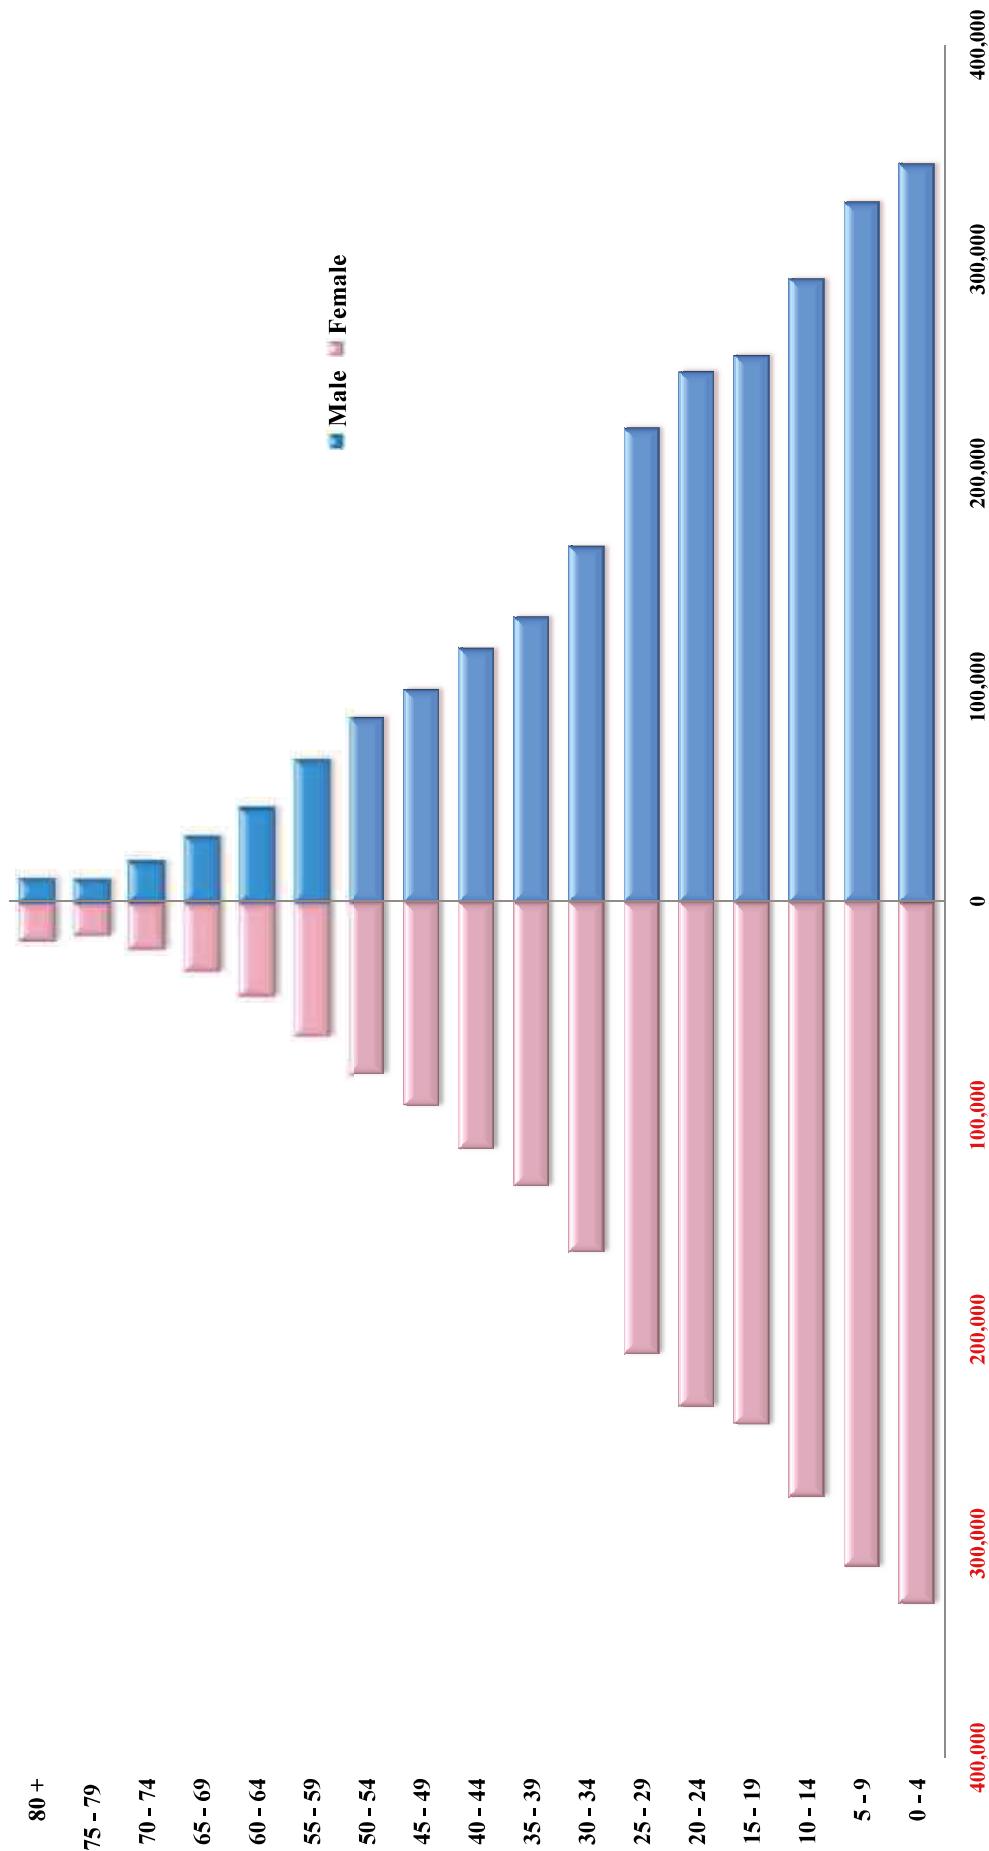

### **3.2.10 Deaths in Reproductive Age Women in 2018**

The total reported number of mortality among reproductive age women (15-49 years) in West Bank in 2018 was 279 deaths, out of which 14 deaths in the age group 15-19 years, which is accounted for 5.0% of all deaths among reproductive age women. While the age group of 20-29, there were 57 deaths accounted for 20.5% of the total mortality of reproductive age women. Among the 30-39 age group, 74 deaths occurred in 26.5% of the total deaths of reproductive age women. While the age group of 40 to 49 years, there were 134 reported deaths 48.0% of all deaths of reproductive age women.

The percentage of reproductive age women mortality was 3.9% of all reported deaths in 2018.
